HackerRank + surescripts®

Surescripts serves the United States with the single most trusted and capable health information network, built to increase patient safety, lower costs and ensure quality care.

> One of the best features of HackerRank is its ability to provide the candidate with a variety of programming languages for any given coding exercise. Keeping a language-agnostic approach helps us focus more on the engineers' problem-solving skills, rather than their rote knowledge of a specific programming language.

Eric Kirchstein
Software Development
Manager

HackerRank

"

Given the current climate with COVID-19, we are using **HackerRank's Developer Skills Platform** to enhance our remote interviewing experience to provide an integrated environment for candidates to showcase their talent.

It has proven invaluable to have a **single interface** to allow the interviewer to observe the candidate's problem-solving abilities while running custom exercises in **real time** on their solutions, and privately adding comments and ratings on discrete skills.

We evaluated several different offerings before deciding on HackerRank. Each offering had bits and pieces of functionality that suited the needs of Surescripts, but each lacked a more complete solution. HackerRank's Developer Skills Platform provided more of an end-to-end toolset that was easy to administer and provided a great candidate experience to developers.
